

## TAREA TC – XPath -- la que hacemos en la TC

Partiendo del siguiente árbol de un documento XML

```
<body type="anthology">
  <div type="poem"><head>The SICK ROSE</head>
    <lg type="stanza">
      <l n="1">O Rose thou art sick,</l>
      <l n="2">The invisible worm,</l>
      <l n="3">That flies in the night</l>
      <l n="4">In the howling storm:</l>
    </lg>
    <lg type="stanza">
      <l n="5">Has found out thy bed</l>
      <l n="6">Of crimson joy:</l>
      <l n="7">And his dark secret love</l>
      <l n="8">Does thy life destroy.</l>
    </lg>
  </div>
  <!-- more poems go here -->
</body>
```

indicar cual será el resultado de las siguientes expresiones Xpath:

1. /body/div/head
2. /body/div/lg
3. /body/div/@type
4. /body/div/lg/l
5. /body/div/lg/l[@n="2"]
6. /body/div[@type="poem"]/head
7. //lg[@type="stanza"]
8. //div[@type="poem"]//l
9. //l[5]
10. //lg/./@type
11. //l[@n>5]
12. //div[head]/lg/l[@n="2"]
13. //div[@type="poem"]//l
